PAIN AND KAMPO MEDICINE Vol.11 (2001)

Effects of Boi-ogi-to on knee-joint-pain and swelling

Yoshikazu Onda*

Abstract: Two cases of old female patients with knee-joint pain and swelling were treated with Boi-ogi-to (TJ-20). They received usual orthopedical treatment: hot pack, analgesics, muscle relaxants and knee-joint punctures. However, the treatment was not effective for their knee-joint pain and swelling. Then, Boi-ogi-to 7.5g 3X/day was medicated. This relieved the pain and swelling markedly in the short term.

Key words: Boi-ogi-to, knee-joint-pain, swelling
