症例報告

顎関節症に対する桂枝加朮附湯の効果

桑原 徹*

要旨: 顎関節症の治療には、薬物療法やスプリント療法、外科的療法などが用いられる. また、痛みに対しては非ステロイド系消炎鎮痛剤が用いられることが多い. 今回、非ステロイド系消炎鎮痛剤で痛みの改善が認められなかった 15 症例を対象とし、桂枝加朮附湯を投薬した. 結果 12 症例は、改善が認められた.

痛みの改善効果は、桂枝加朮附湯の附子の成分が体を温め、新陳代謝機能を高める作用に大きく影響したのではないかと考えられた。 顎関節症治療において、桂枝加朮附湯は有用な薬剤である可能性が示唆された.

PAIN AND KAMPO MEDICINE Vol.28 (2018)

Clinical effect of keishikajutsubuto in temporomandibular joint diseases. Toru KUWAHARA *

Abstract: Pharmacotherapy and sprint therapy, and surgical treatment are used for treatment of temporomandibular joint diseases. In pharmacotherapy NSAIDs are very effective on pain due to temporomandibular joint generally. We reported the clinical effect of keishikajutsubuto in fifteen temporomandibular joint pain patients those were unresponsive to administration of NSAIDs. Improvement of symptoms was observed in twelve patients after treatment with keishikajutsubuto.

Bushi, component of keishikajyutsubuto could warm body and increase metabolism of body, thus it improved pain. These findings suggest that keishikajutsubuto may be useful for improving the temporomandibular joint diseases.

Key words: Temporomandibular joint diseases, Keishikajutsubuto, Kampo medicine
